

NETWORKING SOLUTIONS

Passive components and active devices for networking

Italian innovation
 SINCE 1933

FRACARRO

NETWORKING SOLUTIONS

With a dedicated internal **business unit**, **Fracarro is the ideal partner** for deploying broadband telecommunications networks in commercial, hospitality, and residential facilities.

Our **networking portfolio** includes all the devices needed to build fiber optic systems, from **passive copper and fiber components** to **active equipment**, with particular expertise in GPON (Gigabit Passive Optical Network) technology solutions.

FRACARRO NETWORKING SERVICES

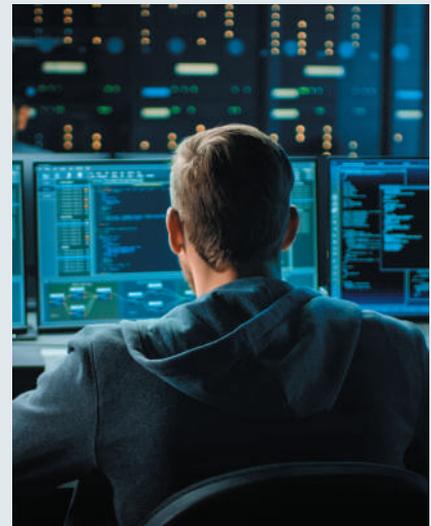

Thanks to a team of dedicated professionals, Fracarro can provide remote support to designers and installers for the deployment of specialized systems.

For Network Designers

- Network Design Support
- Logical Network Diagrams
- Bill of Materials (BOM)
- Product Technical Data Sheets
- Budget Estimates
- Consulting Services

For Network Installers

- Remote Support
- IP Plan Definition
- Declaration of Conformity
- Technical Assistance
- Training

COPPER PASSIVE COMPONENTS

ETHERNET CABLES

Fracarro Ethernet cables offer a high-quality, reliable solution for the electrical sector, with construction features that ensure **excellent performance**. Ideal for both complex environments, such as data centers, and residential installations, the cables are available in **305m reels for indoor** use and **500m reels for outdoor** applications.

VERSATILITY

The 0.5 mm thickness (**AWG 24**) ensures great flexibility, making the cable ideal for all types of installations.

HIGH QUALITY

The conductors are made of **100% flexible red copper**, ensuring minimal signal loss and optimal performance, especially for **PoE applications**.

FIRE RESISTANCE

In the specified models, the **CPR Cca** certification ensures safety in fire-risk environments and high-density areas.

INDOOR

COPPER PASSIVE COMPONENTS

RJ45 UTP AND STP PLUGS

CAT5E/6/6A UTP and STP Plug for high-density installations, compatible with both solid and stranded cables. Constructed from high-quality plastics with gold-plated terminals. Also available in a pass-through version.

Category	Crimping	Item	Code
CAT 5E	Terminal	CAT5E PLUG UTP	287710
	Pass-through	CAT5E PLUG PASS	287708
CAT 6	Terminal	CAT6 PLUG UTP	287711

CAT 6 shielded	Pass-through	PLUG6SP	287863
	Terminal	PLUG6ST	287862
CAT 6A	Terminal	CAT6A PLUG UTP	287712

MECHANICAL QUALITY

They provide wear resistance for at least **750 in/out cycles**.

DUAL VERSION

Available in both terminal and pass-through versions, with the latter facilitating correct cable crimping.

POE READY

They support a current flow of up to 1.5 A, making them suitable for PoE applications.

RJ45 CRIMPING TOOLS

Crimping tools for RJ45 plugs, available in both standard and pass-through versions. Designed to ensure precise and reliable terminations, they feature a rubberized grip for increased comfort and control.

Crimping	Item	Code
Pass-through	RJ45 PASS TOOL	287726

COPPER PASSIVE COMPONENTS

RJ45 KEYSTONE JACKS

RJ45 UTP and STP Keystone jacks, ideal for **high-density installation solutions** and suitable for data networks with performance up to **10 Gbps**. Tool-free for both installation and connection, ensuring significant time savings during assembly.

TOOL-FREE INSTALLATION

Designed for easy installation without the need for additional tools.

WIDE COMPATIBILITY

Compatible with cables ranging from 0.40 mm to 0.65 mm in diameter, both solid and stranded.

HIGH DURABILITY

Made from high-quality plastics to ensure long-lasting performance.

	Item	Code	Color
CAT 5E	CAT5E KEYSTONE	287705	white

	CAT6A KEY NERO	287811	black

COPPER PASSIVE COMPONENTS

KEYSTONE BOX

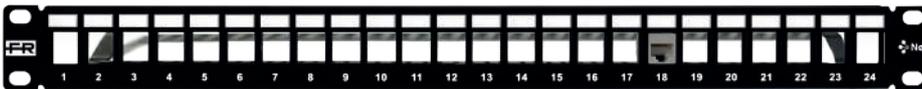

Wall-mounted distribution box for 2x RJ45 Keystone jacks, ideal for terminating Ethernet cables near cameras, access points, and other devices. In GPON solutions, it is installed in the false ceiling to distribute cabling to 503 outlets.

	Item	Code
Box CAT 5E/6/6A	RJB2IP	287785

PATCH PANEL

Patch panel with **up to 24x RJ45 Keystone UTP/FTP ports**, ideal for terminating CAT 5e, CAT 6, and CAT 6A cables in 19" racks. It features a stainless steel rear panel and a fixed bar for neat cable management.

EFFICIENT MANAGEMENT

Supports up to 24 RJ45 Keystone connections in a single panel.

DURABILITY

Made of stainless steel for enhanced longevity and stability.

STRUCTURED INSTALLATION

Designed with a rear bar to ensure organized cable management.

	Item	Code
Patch panel 1U	RJB24IR	287784

Simplified, tool-free installation

COPPER PASSIVE COMPONENTS

RJ45 PATCH CORD

Fracarro's range of patch cords ensures connections up to 10 Gbps. Made with **LSZH** (Low Smoke Zero Halogen) sheath for fire resistance, they offer high quality and performance in various environments. For easy cable identification, **interchangeable color clips** are available in packs of 100 pieces with mixed colors.

SIMPLIFIED MANAGEMENT

Interchangeable color clips can be applied to simplify cable identification during installation, eliminating the need to map each individual connection.

TANGLE-FREE DESIGN

Engineered to prevent tangling, these cables are more durable, reducing the need for future replacements.

GUARANTEED QUALITY

The conductors are made of **100% flexible red copper**, ensuring minimal signal loss and optimal performance, especially for PoE applications.

THE HEART OF THE SYSTEM

Designing a network infrastructure using **networking switches of different levels** (Layer 2, 2+, and 3) allows for the creation of a **scalable, high-performance, and segmented system**.

Depending on their functionalities, switches are placed at different points within the network.

Layer 3 Switches (e.g., Fracarro Series 9)

Layer 3 switches serve as the **network's central hub**, responsible for:

- Routing traffic between subnets and VLANs using advanced routing services and dynamic routing protocols such as OSPF and BGP.
- Ensuring security and Quality of Service (QoS) by applying Access Control List (ACL) rules and prioritizing critical traffic.
- Enhancing network security and scalability through stacking connections and support for protocols like STP and VRRP.
- Maintaining network operation even in case of failures by implementing redundancy and failsafe solutions.
- Managing multicast traffic via IGMP and multicast routing through the PIM protocol.

Layer 2+ Switches (e.g., Fracarro Series 8)

Layer 2+ switches handle VLAN traffic and provide proper segmentation by:

- Supporting static routing and VLAN creation, allowing network segmentation into logical groups.
- Routing traffic between VLANs, reducing the load on Layer 3 switches and optimizing resources.
- Minimizing latency through MAC address-based switching.

Layer 2 switches connect endpoints to the network and are used in environments where bandwidth demand between switches is limited. They are also available in Unmanaged and Unmanaged PoE versions, suitable for small networks that still require reliable Gigabit performance.

ACTIVE DEVICES

SERIES 9 - LAYER 3 SWITCH

The Series 9 switch is the **heart of the network infrastructure**. Designed for use as a Layer 3 switch, it is commonly deployed as the central hub to manage server, controller, and central system connections. It features 6 SFP+ ports for interconnection with other parts of the system via fibre optics.

FSW-948C-6SFP+

Description	Item	Code
48-Port Ethernet Switch	FSW-948C-6SFP+	287764

CONSTANT HEARTBEAT

Ensures 100% uptime with hot-swappable power supplies that can be replaced without interruptions

EXTENSIVE NETWORK COVERAGE

48 Ethernet ports and 6 SFP+ ports with data transfer speeds of up to 10 Gbps.

EFFICIENT DATA TRANSPORT

215 Gbps backplane to ensure instantaneous internal data exchange between switch ports.

SFP & SFP+

SFP modules for fibre optic interconnections between switches, whether within the same rack or across different environments. They provide data transfer speeds of 1 Gbps or 10 Gbps RX/TX, depending on the model, with coverage up to 20 km.

SFP 10G LC SM

SFP 1G LC SM

Description	item	Code
SFP+ 10GE Module for Uplink or Trunk Switch	SFP 10G LC SM	287761
SFP 1GE Module for Uplink or Trunk Switch	SFP 1G LC SM	287555

ACTIVE DEVICES

SERIES 8 - LAYER 2+ SWITCH

Layer 2+ switch for **medium and large-scale networks**, available in versions with 24 or 48 10/100/1000 GE ports, 4 or 6 SFP+ 10GE slots, and a backplane of up to 216 Gbps. Stackable and equipped with IGMP snooping support, they are ideal for common areas, offices, and large-scale networks.

FSW-824-4SFP+

Description	SFP ports	Item	Code
24-Port Ethernet Switch	4	FSW-824-4SFP+	287765
24-Port Ethernet PoE Switch	4	FSW-824P-4SFP+	287767
48-Port Ethernet Switch	4	FSW-848-4SFP+	287766
48-Port Ethernet PoE Switch	6	FSW-848P-6SFP+	287768

SERIES 7 - LAYER 2 SWITCH

Layer 2 switch for **small-scale networks**, available in versions with 8 or 24 10/100/1000 GE ports, 2 or 4 SFP 1GE slots, and a backplane of up to 56 Gbps. They support IGMP snooping, and two of the three available variants are equipped with PoE functionality.

FSW-708P-2SFP

Description	SFP ports	Item	Code
8-Port Ethernet PoE Switch	2	FSW-708P-2SFP	287771
24-Port Ethernet PoE Switch	4	FSW-724P-4SFP	287770
24-Port Ethernet Switch	4	FSW-724-4SFP	287769

ACTIVE DEVICES

SERIES UNMANAGED - LAYER 2

The new range of Fracarro Unmanaged Ethernet Switches consists of compact 5- and 8-port models, also available in PoE+ versions. These devices enable stable connections and Gigabit performance even in small systems..

GES08

GES08P

8 Ports 10 Gbps, supports up to 2048 AP users	3 SFP+ 10GE ports	WCTRL-256-SFP+	287775

RACK

CABINETS & ACCESSORIES

The **19" floor-standing and wall-mounted rack** cabinets are ideal for telecommunications, IT, and audio/video installations. The floor-standing models offer high load capacity and modular structures, while the wall-mounted versions are compact and easy to install. Both come pre-assembled and ready for use.

The range also includes a **selection of accessories** for managing copper and fibre cables, as well as supports for equipment not designed for 19" rack mounting.

FIBRE OPTICS

The use of **fibre optics** in network infrastructures **enhances system efficiency**, thanks to its technical characteristics, enabling the transmission of high-quality signals even over long distances.

Advantages of Fibre Optics

- **Efficiency:** High bandwidth availability.
- **Signal Quality:** Extremely low attenuation (0.2 to 0.5 dB/Km) and complete immunity to electromagnetic interference.
- **Durability and Resistance:** Fibre optics are not subject to oxidation.
- **Ease of Installation:** Lightweight and compact dimensions.

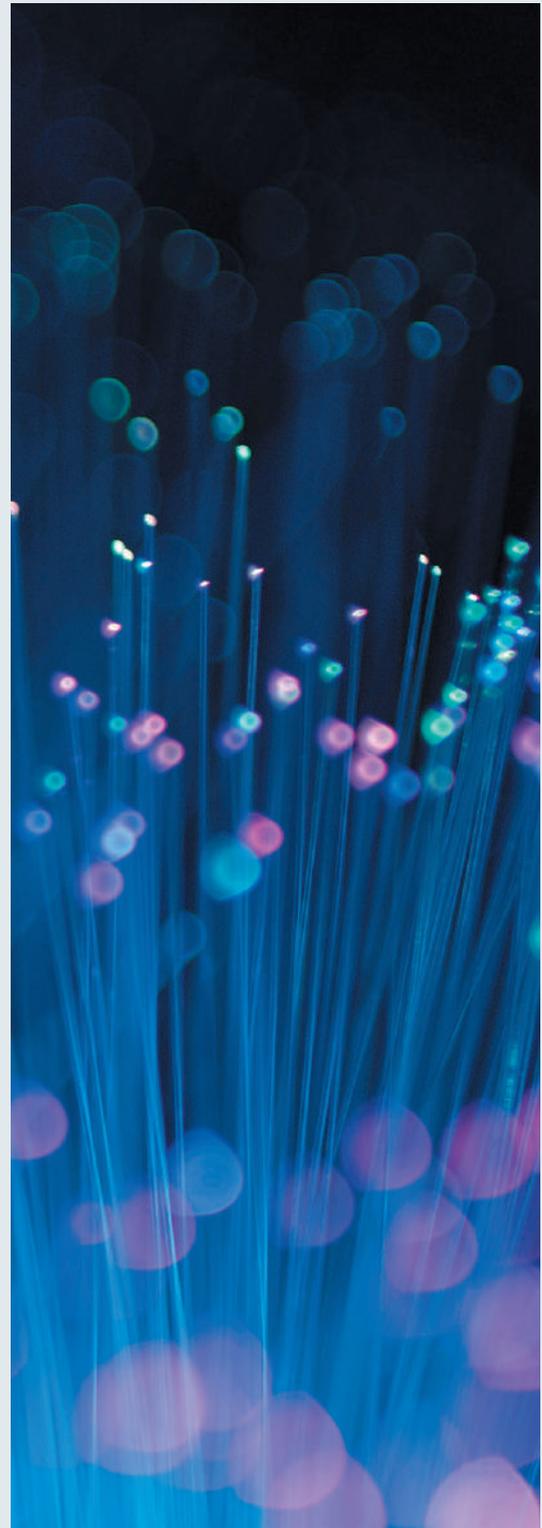

Hybrid Fibre Optic + Copper Networks

Fibre optics can also be used in combination with **copper cabling**.

In **hybrid networks**, fibre optics serve as the main backbone to transmit data between core devices, while copper can be used for local terminations.

This configuration offers the following advantages:

- **Greater Efficiency and Coverage:** Fibre optics as a backbone reduces cable bulk and ensures more stable and faster connections, while copper covers final connections where shorter distances are involved.
- **Compatibility with Existing Infrastructure:** Hybrid networks allow the reuse of existing copper infrastructure, reducing the cost of a full fibre upgrade.
- **Future Expandability:** A fibre backbone ensures that the network is ready for future expansion or speed upgrades up to 100 Gbps or beyond, minimising the need for new installations.

PASSIVE FIBRE COMPONENTS

MULTIFIBRE CABLES

Single-mode multifibre cables for indoor use and **armored cables** for outdoor use. The loose tube structure provides enhanced protection against moisture and mechanical stress, while the 9/125 single-mode fibres ensure high performance and reduced signal loss.
